RichardBrink\_Glasgelaender\_02

The system consists of stainless-steel posts with glass supports and retaining plates as well as glass panels made from laminated safety glass.

The maximum distances between the stainless-steel posts are specified based on the chosen height to guarantee the required stability of the balustrades.

The balustrades are firmly affixed using retaining plates at the bottom end of the posts.

For the corner connections, the metal products manufacturer provides posts that are able to hold glass panels to either side at a right angle. This maintains the rectangular shape of the balustrade when viewing the solution from the outside.

The maximum projection of the systems is 210mm from the outer edge of the post to the fixing point of the retaining plate.
